

Absolut Vodka: Recycling and Bottle Optimization Report

📍 *Aligning sustainability with market performance*

 **3 contributeurs**

Key Indicators

7.69K

Purchase vs Sales Gap

36.85%

Avg Recycled Content

23.12K

Total Recycling Tonnage

56.54K

Total Tonnage Absolut Vodka
(100% of the Brand Clean category)

Data Analysis by Destination and Environmental Impact

Primary Destination Country

Sweden

Total Absolute Tonnage

56,537.97 tons

Recycled Content Rate

36.85% ,Others have lower levels (0.52% to 17.12%)

Carbon Impact

Varies from **265 kg to 15.86K kg** per supplier (Other brands average is 3.93Kg)

Transportation Distance

Multiple deliveries made over **242 to 1329 km**

Objective: Enhance Recycling and Bottle Strategies

Recycling Analysis

Improve **recycling rates** in key markets.

Sales Correlation

Align these changes with **market realities and product positioning**.

Environmental Impact

Optimize **bottle design** to reduce environmental impact.

Absolut Vodka: Packaging Components

Understanding the materials in our packaging is key to optimizing recycling efforts.

Component	Material	Recycling Status
Bottle	Clear Glass	Fully Recyclable
Cap	Plastic	Recyclable in Some Areas
Label	Plastic	Limited Recyclability

The glass bottle forms the primary component and is 100% recyclable, while plastic components present varying degrees of recyclability based on local facilities.

Material Recyclability in Sweden (Primary Production)

Glass Components

82,8% recycling rate

Plastic Elements

23,8% recycling rate

Paper Materials

for transport

84,8% de recycling rate

Sweden's advanced recycling infrastructure provides optimal conditions for sustainable packaging material management, supporting Absolut's commitment to environmental responsibility.

Key Insights from Recycling Analysis (Distribution Market)

Europe

📍 France, United Kingdom, Germany, Scandinavia, Spain, Italy

✅ Excellent recyclability for all materials

- **Glass:** Advanced collection systems, high recycling rate (>75%).
- **Plastic & Paper:** Good integration into the recycling circuit.
80% paper / 40% plastic

➡ Bottles produced in France and Sweden have an optimal recycling cycle in Europe.

North America (USA, Canada)

North America (USA, Canada)

📍 Key market for Absolut Vodka

♦ Recyclability varies by state/province

- **Glass:** Moderately recycled (~40% in the USA, better in Canada).
- **Plastic & Paper:** Recycling is possible, but depends on local infrastructure. Between 25% - 65%

➡ Packaging sent to North America is partially recycled, especially in Canada.

Key Insights from Recycling Analysis (Distribution Market)

South America (Brazil, Argentina, Mexico, etc.)

📍 Emerging market for Absolut Vodka

⚠️ Low recyclability, strong dependence on the informal sector

- **Glass:** Little collected in some countries (~30% recycling).
- **Plastic & Paper:** Chile 40%, Brazil 80%, Argentina 10%

➡️ Bottles sent to South America have a very low probability of being recycled.

Asia & Oceania (China, Japan, South Korea, Australia)

📍 Asia: Strategic growth market

◆ Great disparities between countries

- **Japan & South Korea:** Excellent recyclability (well-sorted glass and plastic). 80% on average
- **China, India, Southeast Asia:** Limited collection, often informal recycling. 30% on average

➡️ Bottles distributed in Japan & South Korea have a good end-of-life, unlike China & Southeast Asia.

Africa

📍 Secondary market

⚠️ Recyclability almost non-existent (<20%) except for South Africa

• **Glass, Plastic & Paper:** Little or no organized collection.

➡️ Bottles sent to Africa are rarely recycled.

Key Insights from Recycling Analysis (Global vision)

- 1 Europe:**
High recycling rates (>80% in many countries)
- 2 North America:**
Mixed performance (50-95%, depending on states/provinces).
- 3 South America:** Many countries **below 40%** recycling rates.
- 4 Asia-Oceania:** Developed countries perform well, but **emerging markets struggle (<40%)**
- 5 Africa:** Overall **low recycling rates (<30%)**, infrastructure challenges

Identifying Opportunities by Location

📍 Markets with high sales & low recycling

📍 Brazil, Mexico, India, Indonesia, South Africa

→ High sales, but **poor recycling infrastructure (<40%)**.

✅ Opportunities for action:

1

Partner with recycling organizations to boost collection efforts.

2

Incentivize Returns

Encourage bottle return programs via incentives.

3

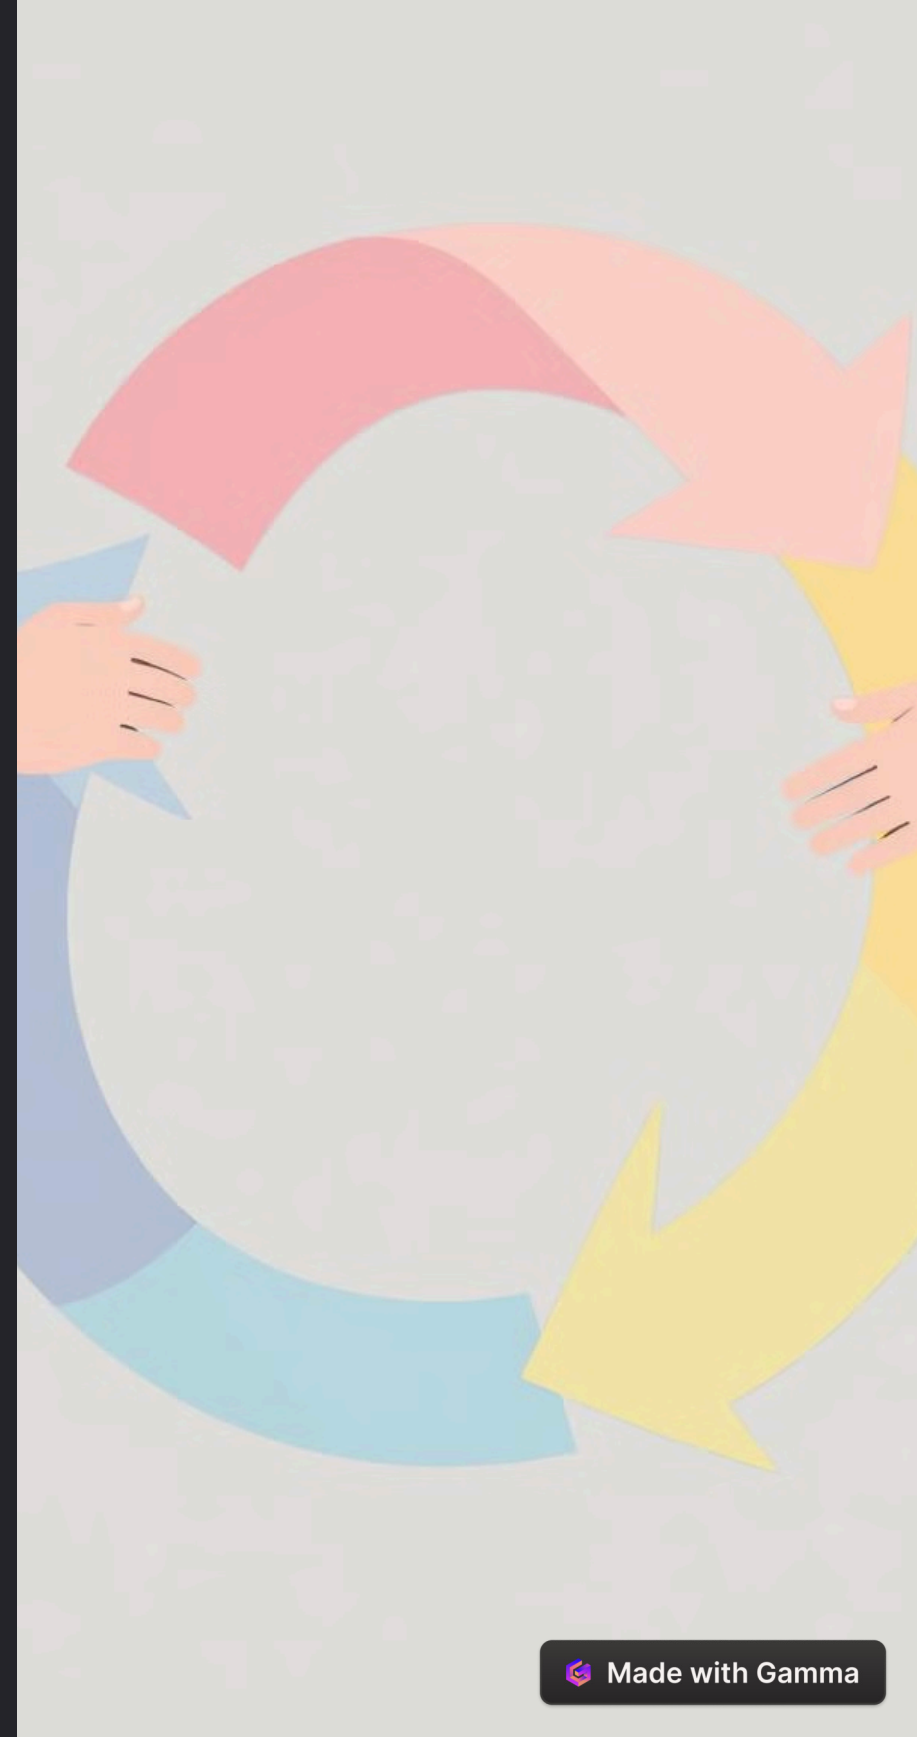

Educate Consumers

Develop marketing campaigns for awareness.

4

Negotiate Infrastructure

Work with governments to improve recycling laws.

Optimizing Bottle Design

Reduce Weight

Reduce bottle weight to decrease CO₂ emissions

Optimize Color

Change bottle color to match recycling capacities (flint instead of green/brown)

Increase Recycled Content

Maximize recycled glass in bottle production.

Priority Markets for Bottle Adjustments:

South America & Southeast Asia → Move from colored glass to extra-flint for better recyclability.

North America & Europe → Reduce bottle weight for Standard & Premium products.

Action plan

Work with suppliers to introduce lighter, more recyclable bottles

Adapt glass colors based on regional recycling capabilities.

Ensure packaging aligns with brand positioning.

Product Positioning and Bottle Design

📌 Not all products can be modified the same way!

Value/Standard

Easy to modify (weight, color, materials)

Prestige (Elyx)

Almost impossible – design is key to brand identity

1

2

3

Premium/Super Premium

Possible but must maintain brand image

Solution: Collection and Reuse of Absolut Vodka Bottles

Reduce CO₂ impact through the collection and reuse of Absolut Vodka bottles.

3 contributeurs

Establishing Absolut Vodka Bottle Collection Centers

Create dedicated collection centers for Absolut Vodka bottles. Facilitate the return of empty bottles by consumers. Optimize logistics for efficient collection.

Collection

Dedicated centers.

1

Return

Facilitate returns.

2

Logistics

Optimization.

3

Strategic Locations: Supermarkets, Bars, Absolut Events

Partnerships with supermarkets and spirit stores. Installation of collection points in bars and nightclubs. Presence at events sponsored by Absolut Vodka.

Supermarkets

Key partnerships.

Bars

Collection points.

Events

Targeted presence.

Bottle Collection and Sorting Process

Collection of empty bottles in designated centers. Rigorous sorting to separate reusable bottles from others. Cleaning and sterilization of selected bottles.

1

Collection

Dedicated centers.

2

Sorting

Rigorous separation.

3

Cleaning

Sterilization.

CO₂ Impact Reduction Assessment

Data Collection

Calculate emissions saved by reusing bottles. We will evaluate the environmental impact.

1

2

3

Formula

CO₂ Saved = (CO₂ per New Bottle – CO₂ per Reused Bottle) × Number of Bottles Reused.

Key Factors

CO₂ per new bottle versus CO₂ per reused bottle. Multiply by the number of bottles reused.

1 2 3 4 Hypotheses and Input Data

These hypotheses will guide our environmental impact assessment. Data will be updated to refine our strategies.

Metric	Value	Source / Assumption
CO ₂ emissions per new glass bottle	500g CO ₂	Industry average
CO ₂ emissions per reused bottle	150g CO ₂	Includes transport and cleaning
Number of Absolut Vodka bottles sold per year	100 million	Estimated global sales
Target reuse rate (after 3 years)	30%	Ambitious but achievable goal

Projected Impact

Equivalent Reduction

10.5 kilotons of CO₂ saved annually.
Equivalent to removing 2,300 cars from
circulation.

Reuse Target

Reuse 30% of Absolut Vodka bottles.
Significant environmental impact.

Sustainable Benefits

A step towards a greener future.
Commitment to the planet.

Conclusion: Towards a More Sustainable Future with Absolut Vodka

Absolut Vodka is committed to a more sustainable future. Collecting and reusing bottles are important steps. Together, let's build a world that is more respectful of the environment.
