

scorlA

*Helping institutions know what's real
in a world of synthetic content.*

The Problem

Institutions can't tell what's real — and the tools they have make it worse.

60%

Human accuracy
at detecting AI content

65%

of companies using
GenAI in production

4 tools

needed to cover
text + image + audio + video

No competitor covers all 4 modalities. No tool gives a confidence interval. No unified verdict exists.

The Gap Nobody Has Filled

Single-modality tools leave institutions with 3–4 products and still no unified answer.

Tool	Text	Image	Audio/Video	Confidence	Explainability
GPTZero	✓	✗	✗	✗	✗
Hive AI	✗	✓	✗	✗	✗
Deepware	✗	✗	✓	✗	✗
Turnitin	~	✗	✗	✗	✗

What scorIA Does

One platform. Four modalities. A calibrated verdict with an explanation.

The Transformation

What changes in a newsroom editor's or academic integrity officer's day.

BEFORE scorIA

- ✗ 3–4 tools, separate logins
- ✗ Binary yes/no, no confidence level
- ✗ No explanation — can't justify decision
- ✗ 20+ min manual review per case
- ✗ No audit trail for compliance

vs

AFTER scorIA

- ✓ One platform, all 4 modalities
- ✓ Calibrated probability + confidence interval
- ✓ Human-readable explanation included
- ✓ < 3s for text/image, < 10s audio/video
- ✓ Exportable report, audit-ready

Why We Win

Four structural advantages that compound over time.

Full product, minimal cost

Built with 4 people at <€600/mo running cost. Proven capital efficiency before any Series A.

Hardest moat to replicate

Competitors must rebuild 4 separate pipelines + a calibration layer. Years of catch-up.

Data flywheel

Every institutional scan improves our calibration. This advantage is unavailable to competitors.

Strategic positioning

We sit in the missing layer between SynthID (watermarking) and C2PA (certification) — detection from any source.

MVP & 6-Month Roadmap

MVP — Must Have

- Text + image detection (probability score)
- Confidence interval on every result
- Human-readable explanation
- Secure auth + JSON API output
- Chrome extension (zero-friction)
- Calibrated scores (ECE <5%)

Key Milestones

M1

PSL pilot live · 200 free users

M3

Proprietary classifiers trained · ECE <5%

M4

SSO + audit logs + SLA dashboards

M6

20 institutional clients · 500 Pro · MRR €8K

Go-to-Market

Partnership launch anchored on PSL Group — zero acquisition cost, maximum credibility.

Pre-Launch

Weeks -4 to 0

- PSL beta pilot (3 institutions)
- Landing page + waitlist live
- LinkedIn teaser series (3 posts)
- Pre-briefing 2 EdTech journalists

Launch Day

Day 0

- Product Hunt submission
- Email blast to waitlist
- Live webinar demo (30 min)
- Direct outreach to 20 prospects

Post-Launch

Weeks 1-4

- Onboarding drip sequence D+1/7/14
- PSL case study + blog post
- 5 user interviews for M2 roadmap
- Weekly ECE + retention monitoring

Metrics & OKRs

>90%

Detection accuracy
(all modalities)

<5%

Calibration error
(ECE target)

€29K

MRR target
by M12

>40

NPS from pilot
institutions

O1 — Detection is trusted

Train classifiers on Vertex AI (ECE <5%) · Latency <3s · 3 pilots sign off without manual override

O2 — Enterprises deploy with confidence

SSO + audit logs by M4 · 2 enterprise pilots with signed SLA · Renewal intent confirmed M5

O3 — Chosen over 3–4 separate tools

20 institutional clients by M6 · 500 Pro subscribers · Free-to-Pro >8% · NPS >40

Release Strategy

Staged rollout — quality gates at every cohort before expanding.

Rollback Trigger

ECE >10% | Latency p95 >15s (text/image) | Confirmed false positive in live institutional workflow

→ Cohort frozen · Affected analyses flagged 'Under Review' · Engineering SLA: 4 hours to diagnose

The World We're Building

A world where institutions don't have to choose between trusting digital content and verifying it.

Year 1

- PSL + 2 newsroom pilots live
- 20 institutional clients
- 500 Pro subscribers
- MRR €8K

Year 2

- EU AI Act reference tool
- 50+ institutions across Europe
- Audio & video at scale
- Series A ready

Year 3

- Standard verification layer
- Education · Media · Legal · Insurance
- Embedded in publishing workflows
- Europe's trusted AI content OS
