

SOFRADUBA

SUSTAINABLE BAMBOO SOLUTIONS FOR CONSTRUCTION & FURNITURE

SOFRADUBA

holding

Activity:

Design and creation of high-end furniture with bamboo wood

Target market:

B2B European furniture retailers, offices & high income B2C on order

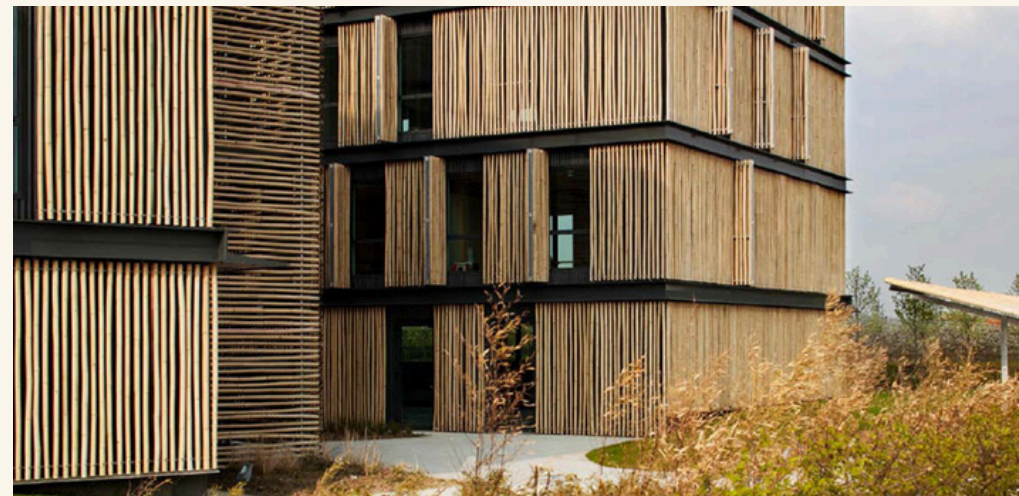

Activity:

Sustainable cultivation, transformation and building creation

Target market:

B2G European local authorities through public procurement & high income B2C on order

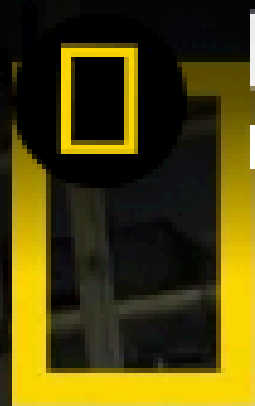

Activity:

Sustainable cultivation & distribution of bamboo

Target market:

B2B European builders & designers

Pourquoi ces ouvriers préfèrent le bambou à l'acier

PLANÈTE

UN MATÉRIAU D'EXCEPTION

Watch on  YouTube

End-to-End Bamboo Supply Chain

I - Sourcing:

- Selection of the appropriate plant variant : *Phyllostachys edulis* & *Guadua angustifolia*
- Harvest planning : construction-grade maturity time is 6 & 4 years for each variant
- Plantation : each year, just after the monsoon season in tropical & warm temperate zones
- Location : zones swith $\geq 1\,000$ mm annual rainfall (or reliable irrigation) & mean annual temperature $>16\text{ }^{\circ}\text{C}$, no prolonged freezes => **French Guyana**  & **LatAm**

2 - Transformation :

- Thermal treatment with semi-carbonization
- Mechanical transformation into semi-finished lumber, parquet & finished furniture

LatAm
Europe

3 - Distribution:

- Container shipments from LatAm
- Regional warehouses in Europe
- Truck delivery

4 - Reverse Logistics:

Bamboo waste recycling (biomass, fiber)

Typical construction-grade bamboo yield

Variant	<i>Guadua angustifolia</i>	<i>Phyllostachys edulis</i>
Per acre (4046,86 m ²)	~10–12 t	~2.4–4 t
Per hectare (10000 m ²)	~25–30 t	~6–10 t

Value of material for sale

Supply step	Price range (USD / t)
Farm-gate (fresh, untreated)	30 – 55
Asia/LatAm Export wholesale, treated round poles	≈ 380 – 700
EU/US distributor (retail poles)	≈ 800 – 1 100

Business & organizational strategies

Differentiation in a niche market :

- High-value sustainable materials
- Cheap alternative to traditional wood
- Amazing environmental footprint
- Strong mechanical properties

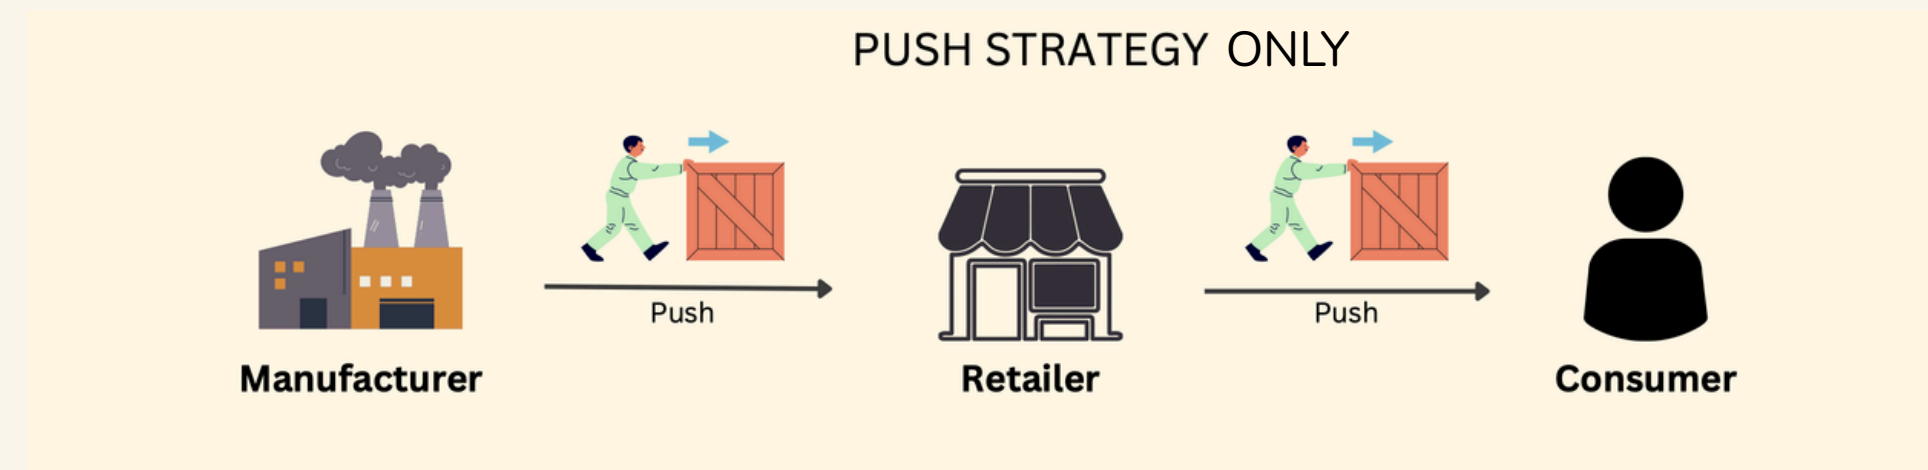

Push Strategy with offer alignment

Is forecast still necessary ?

=> Flexibility for custom orders

=> Offer tailored to demand trends
(dimension, finish, certification)

OVERWHELM THE MARKET !

(not a perishable material)

Value Added Activities

Creating Value Across the Bamboo Chain

Core Activities

- Sustainable bamboo cultivation
- Processing (thermal & mechanical treatment)

Support Activities

- R&D: material innovation
- Marketing: eco-positioning & market education
- HR: skilled workforce
- IT Systems: traceability, inventory & demand tracking

Operational Model

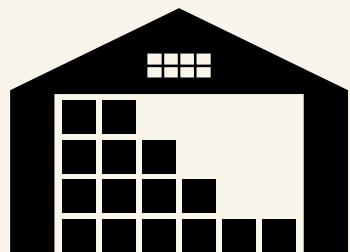

Make to Stock: Anticipation for Agility

- Bamboo grows continuously, which allows us to build up stock throughout the year

- We transform it into standardized finished goods that are ready to ship at any time.

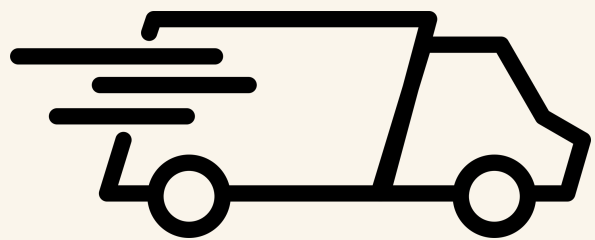

→ Fast response times for our B2B clients, efficient in markets with stable demand and short lead times.

Industrial Strategy

Partial Vertical Integration: Focus on Core

- In-house: Cultivation & Transformation
 - Outsourced: Transport & Distribution
- > Ensures control over quality and costs
- > Flexibility on non-core activities

This balance lets us stay focused on what we do best :

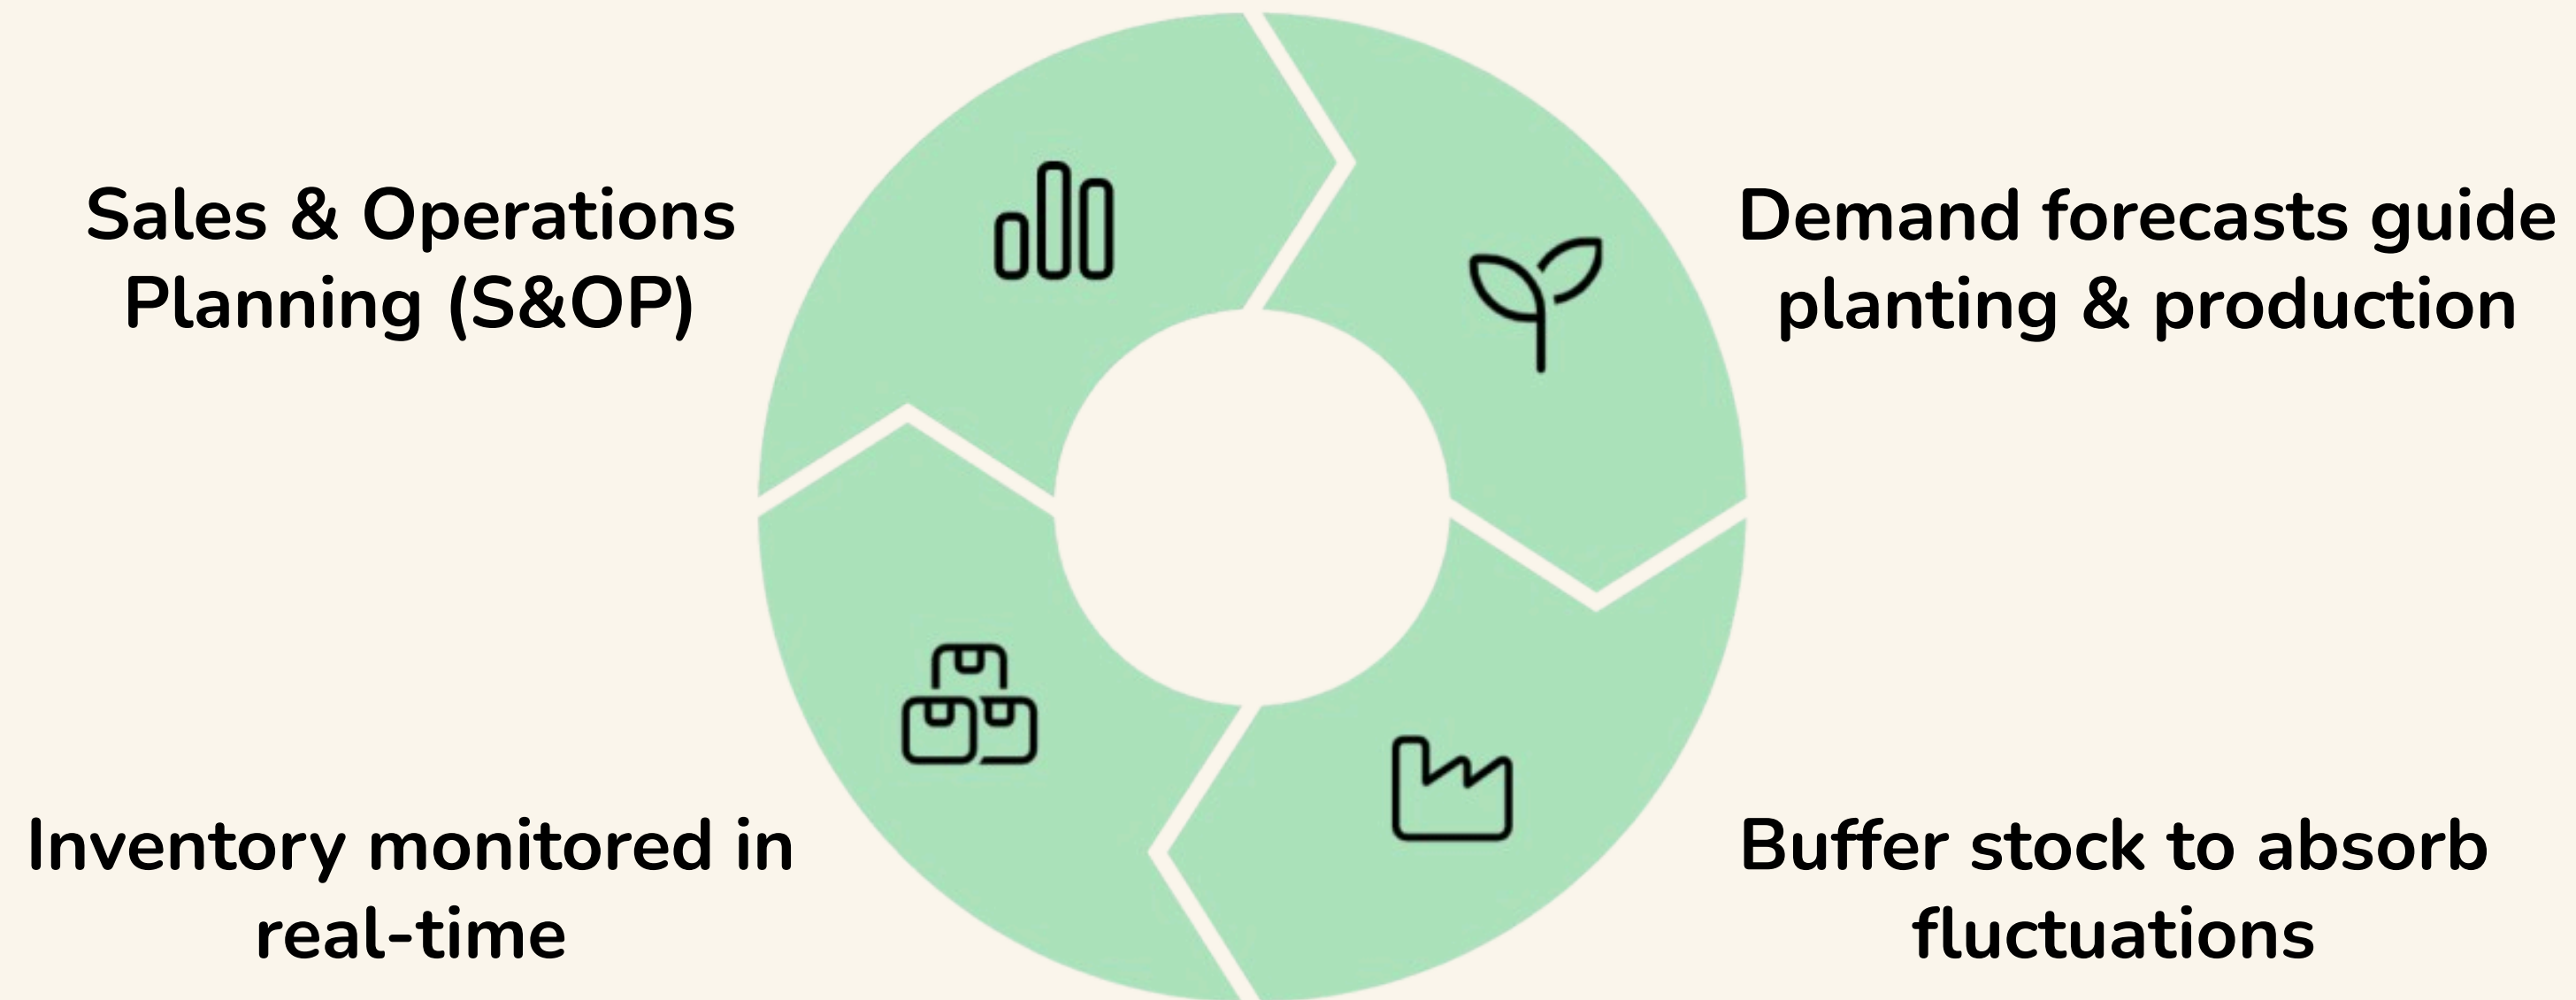

Sustainable bamboo processing—while relying on expert partners for logistics.

Replenishment Strategy

Forecast-Driven Replenishment Strategy

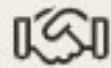

Route to Market

Multi-Channel Distribution Strategy

Direct online sales to professionals

Strategic distributor partnerships who share our values (3PL)

Participation in trade shows, eco expos, raising awareness through culture : social media & books

Mix of digital and physical presence build strong relationships
